CNC Machining

Automatic Screw Machines

Welding

Assembly

Winches, Pulleys & Speed Reducers

Sprockets and Gears

A Complete Production Facility Since 1947

Leedy Experience

Over 60 Years of Manufacturing Experience

Leedy Mfg, a privately owned company, began in 1947 as a small local job shop. With just a few customers and some basic operating principles we set out to build a solid reputation in the production machining industry. The principals are simple—deliver quality products, on time, at competitive prices—they remain the backbone of our business.

Today, Leedy Manufacturing has expanded into one of the most complete production facilities in the Midwest, serving a wide range of customers throughout the U.S. and abroad.

As Leedy moves ahead, we continue to invest in state-of-the-art equipment and methods, committed to fulfilling a variety of customer requirements.

Whether we assist your design engineers in development or perform a specific manufacturing service, you can count on those same basic operating principals!

CNC Machining

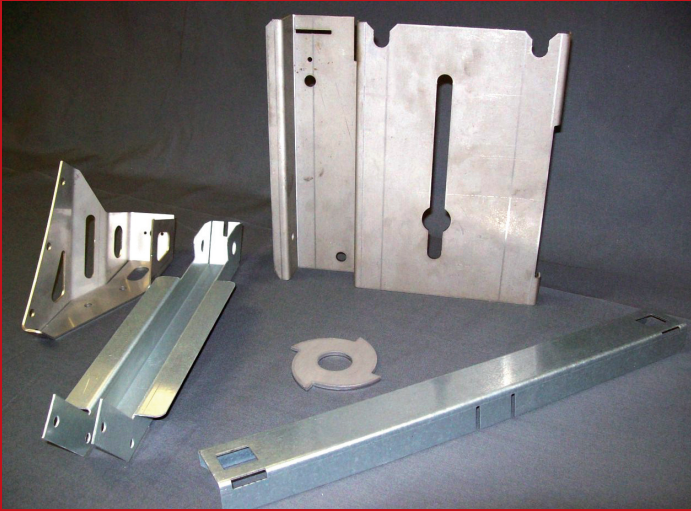

- Our core product line reflects our capabilities. We build gearboxes and mechanical assemblies which demonstrate our ability to precision machine while integrating many different disciplines.
- While our primary core competence is with cast iron and steel, we work with virtually every material from plastic to stainless and brass.

Leedy Services

A Wide Variety of Manufacturing Services

Sheet Metal

- Trumpf CNC sheet fabricators with load-unload automation
- Trumpf CNC high precision brake presses
- Mechanical brake presses and conventional stamping capabilities
- 4-12 foot long blanking and roll form capability with automation for production programs
- 24 gauge through 3/16 capable
- From simple to complex, we have the experience and machinery

Welding

- MIG, Resistance and plasma welding capable for steel, stainless, and galvanized steel.
- Use of robotic/automated processes for small production parts and large assemblies to 5x8 ft overall size, 1000kg max weight

Assembly

Leedy has the ability and experience to process everything from simple two piece sub-assemblies to full, multi-discipline mechanical assemblies (sheet metal, machined parts, gearing, drives, bearings, sprockets and chain). Orders can be coated, assembled and packaged to your specifications and then delivered to your dock (or your customers door) complete!
